## Topic:

WIFIControllerAPP

## Problem statement:

Our project is WifiControllerApp. IT is an android app. A app will control the phone's wifi mode like on and off.

## Description:

We are using android studio to do our project. In our project there will two buttons, one is "Turn on" another one is "Turn off", If the user press the "Turn on" button, a toast message "Wifi Turn ON" will popup and then wifi will be turned on! If the user press the "Turn off" button, a toast message "Wifi Turn Off" will popup and then WIFI will be turned off!

## Technology:

- Javascript
- Xml
- Android studio
